Hiring Team
GE HealthCare

Application: Research Intern – AI

Dear Hiring Team,

I am applying for the Research Intern – AI role at GE HealthCare. I am completing a B.Sc. (Hons.) in Computer Science and Mathematics at Ashoka University, expected in 2028. The role's combination of image analytics, generative models and medical-workflow research connects with my experience in diffusion models, computer vision and physiological time-series analysis.

At the Constrained Image-Synthesis Lab, I worked on colour preservation in latent diffusion, achieving $\Delta E_{00} < 1$ and approximately four times better colour accuracy than evaluated open-source baselines. The methods and results are described in my public preprint, *Inference-Time Loss-Guided Colour Preservation in Diffusion Sampling* (arXiv:2601.17259). My ongoing CGSW research investigates controllable optimal-transport distances, with a paper submitted to JMLR and a hyperspectral experiment on 224-band images across seven waste categories. These projects have given me experience turning a mathematical objective into an implementation and an evaluation.

At the Koita Centre for Digital Health, I contributed to a wearable-data pipeline achieving approximately 70% sensitivity (recall) for asthma exacerbation detection in study evaluation. I developed patient-day processing for 191 patients and 15,691 patient-days, with HR/HRV smoothing, residuals, change-point features and tree-based and recurrent modelling workflows. The evaluation separates same-day detection from future-onset prediction and uses patient-wise splits across five seeds. At Avartan Labs, I raised rare-class correct detection from 40% to 80% in an 18-class RT-DETR detection and tracking pipeline. These experiences connect physiological-data research with practical image analytics.

I would welcome the opportunity to contribute Python, C++ and PyTorch implementation skills to research on image quality and AI-assisted workflows, while learning from your technologists and engineers. I would bring experience with noisy data, model failure analysis and research prototyping to the team. Thank you for considering my application.

Yours sincerely,

Aarush Ram Anandh
