Hiring Team
Honeywell

Application: AI Internship

Dear Hiring Team,

I am applying for the AI internship at Honeywell. I am completing a B.Sc. (Hons.) in Computer Science and Mathematics at Ashoka University, expected in 2028. I am interested in the practical work of building AI algorithms around sensors, understanding failure cases and turning models into systems that people can inspect and use.

At Avartan Labs, I raised rare-class correct detection from 40% to 80%, a gain of 40 percentage points, in an RT-DETR detection, classification and tracking pipeline for 18 waste-material classes. I investigated focal loss, logit adjustment, class-specific thresholds and targeted fine-tuning to address rare-class performance, and used crop-based refinement to examine detector failures. I also helped set up a near-infrared waste-segregation system for visually similar plastics, including parts procurement and preliminary experiments. This work is directly relevant to my interest in industrial AI and automation.

My Shooting Stability Trainer project combines OpenCV marker tracking with a Flask-SocketIO server and a JavaScript interface. It provides segmentation-mask feedback, scale calibration and manually recorded motion traces on a virtual target. In a separate lab workflow, I built a Python pipeline for extracting structural vectors from packaging artwork, supporting generation of more than 20,000 training inputs. At the Koita Centre for Digital Health, I also contributed to a wearable-sensor pipeline achieving approximately 70% sensitivity for asthma exacerbation detection in study evaluation, building preprocessing and change-point features with patient-wise evaluation.

I would bring hands-on Python and C++ experience, an interest in model behaviour under imperfect inputs, and a willingness to work through the details of calibration and evaluation. The opportunity to develop AI systems alongside experienced Honeywell engineers would let me build on this work in real-world automation projects. Thank you for considering my application.

Yours sincerely,

Aarush Ram Anandh
