EXECUTIVE SUMMARY

Generative-model researcher investigating model behaviour and controllable optimal transport.
Public diffusion preprint, Python/PyTorch prototyping, controlled PPO studies and masked DQN.
Audio classification and time-series foundation-model integration; interested in multilingual LLMs.

EDUCATION

Ashoka University — B.Sc. (Hons.), Computer Science and Mathematics **Expected 2028**

RESEARCH EXPERIENCE

Constrained Image-Synthesis Lab, Ashoka University **Sep 2025–Present**
Research Fellow

- Improved latent-diffusion colour fidelity to $\Delta E_{00} < 1$, with approximately **4× better colour accuracy** than evaluated open-source baselines; results reported in the preprint below.
- Developing **Controlled Generalised Sliced Wasserstein (CGSW)**, an optimal-transport framework with control-conditioned probes, projections and slice aggregation; paper submitted to **JMLR**.
- Studying metricity, stability and probe/readout construction; implementing computational methods in **C++** and machine-verified specifications and proofs in **Lean**.

Koita Centre for Digital Health, Ashoka University **May 2026–Present**
Research Intern (part-time)

- Contributed to a wearable-data pipeline achieving approximately **70% sensitivity (recall)** for **asthma exacerbation detection** in study evaluation.
- Built experimental frozen time-series foundation-model routes for forecast-surprise features and embeddings; implemented but not yet run in the reported cohort evaluation.

INDUSTRY EXPERIENCE

Avartan Labs **May–Jul 2026**
Product Engineering / Machine Learning Intern

- Raised rare-class correct detection from **40% to 80%** (**+40 percentage points**) in an **RT-DETR** detection, classification and tracking pipeline for **18 waste-material classes**.
- Investigated focal loss, logit adjustment, class-specific thresholds and targeted fine-tuning for rare classes; evaluated detector failure modes through crop-based refinement.

SELECTED RESEARCH PROJECTS

Reinforcement Learning for Pokemon Battles **Ongoing**
Two-Person RL Coursework Project [GitHub]

- Co-developed a **Gymnasium/poke-env** environment with **763 observation features**, legality masks over 26 actions, potential-based reward shaping, and **MaskablePPO and masked DQN** agents.
- Evaluated PPO across **two variants and five seeds each** at 200,000 steps/run; achieved **99.7–100% wins** against the fixed heuristic (1,020 final battles/run), with convergence and uncertainty analysis.

MEIKURAL: Hindustani Raag Recognition **Ongoing**
Audio Classification / Signal Processing [GitHub]

- Developing a **Python/PyTorch** pipeline for **seven Hindustani raags** using the Saraga Hindustani dataset; implemented resampling, RMS normalisation and overlapping **30-second audio windows**.
- Explored per-window and full-recording tonic alignment against native-frequency **STFT/CNN** representations; trained a native-STFT CNN on **3,471 windows over 30 CUDA epochs**.

PUBLICATION

Inference-Time Loss-Guided Colour Preservation in Diffusion Sampling (2026).
Public preprint: arXiv:2601.17259; colour-fidelity research described above.

TECHNICAL SKILLS

Programming: Python, C++, Bash, Lean. **Frameworks:** PyTorch, Diffusers, TensorFlow.
Methods: Diffusion models, Transformers, PPO/DQN, optimal transport, audio processing, model evaluation.
